[GitHub](#) — [Portfolio](#)

Summary

B.Tech student specializing in Data Science and Artificial Intelligence with hands-on experience in Machine Learning, NLP, Computer Vision, and frontend systems. Experienced in building end-to-end solutions including data processing, model integration, and real-time applications. Focused on applying AI to real-world and practical problem-solving.

Education

Rungta College of Engineering and Technology B.Tech in Computer Science (Data Science)	2024 – Present
St. Paul's School, Rourkela, Odisha Class XII	First Division

Technical Skills

Languages: Python, SQL, JavaScript
Libraries: Pandas, NumPy, Scikit-learn, OpenCV, Transformers
Tools: Git, GitHub, Firebase, MongoDB, Vite
Core: Machine Learning, EDA, Feature Engineering, Web Integration

Relevant Coursework

Machine Learning & AI: Machine Learning, Artificial Intelligence, NLP Basics
Data Science: Data Analysis, EDA, Feature Engineering
Mathematics: Probability & Statistics, Linear Algebra

Projects

KisanBuddy – AI Assistant for Farmers [\[GitHub\]](#)

- Built a voice-enabled AI assistant for crop advisory and farmer support
- Trained ML models on 2,000–5,000 samples achieving **80–85% accuracy**
- Integrated Firebase backend with response latency under **2 seconds**
- Designed system for rural accessibility using voice-first interaction

VeriGraph-AI – Fake News & Deepfake Detection (HackSprint 2026 Winner) [\[GitHub\]](#)

- Developed a multi-modal detection system for fake news, images, and videos
- Implemented NLP models using **BART + RoBERTa** on 10,000+ text samples achieving **88–92% accuracy**
- Integrated deepfake detection for images and videos using **EfficientNet**-based architecture
- Built an end-to-end pipeline combining text and visual verification for credibility analysis

SIH25 Prototype – Smart Attendance System [\[GitHub\]](#)

- Built a lightweight attendance system using face detection and QR-based verification
- Implemented on-device face detection using **face-api.js** for real-time scanning

- Developed QR code generation and scanning modules for student-teacher interaction
- Designed React + Vite frontend with modular architecture and multiple functional pages
- Enabled camera-based authentication with optimized performance in browser environments

SentinelX – Hazard Detection System [\[GitHub\]](#)

- Developed OpenCV-based system processing **20–30 FPS**
 - Achieved **85% detection reliability** with real-time alerts
-

Experience

Freelancer – Technical Work

- Delivered technical and development-based work in AI and ML domains
-

Achievements

- Winner – HackSprint 2026 (**3000 Prize**)
 - Participated in HackIndia, HackBio, and SIH
-

Career Objective

To leverage Data Science and AI to build impactful solutions for real-world challenges, particularly in rural and underserved domains, while developing strong research and engineering expertise.
